How to automate your Employee onboarding process

DEMO

Define custom asset structures

Jira Workflows

Update custom fields
Update custom fields with
values from objects

HR Use Case

- Update Manager field
- Update Start Date field
- Update End Date field

Update objects
Update object values with pre-defined values

HR Use Case

- Update status of equipment
- Update information about employees

Create objects
Create objects with values
from custom fields

HR Use Case

- Create new employee objects
- Create new equipment objects

Jira Workflows

Assign issues

Assign an issue based on an object value.

- Assign to Manager
- Assign to HR Assistant

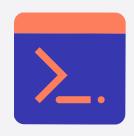

Update custom fields based on IQL queries

Use IQL to filter on objects to assign to a custom field.

HR Use Case

- Add mandatory trainings

Run Groovy Scripts

Use groovy scripts to create pre-defined tasks automatically... and much more.

HR Use Case

Create predefined linked issues

Recap

Use Insight and automation when onboarding employees to make sure all tasks are taken care of and to create and store employee related assets.

The Business Value

Save time and money

By automating the processes you need fewer people and better management of assets will save time and money

Employee Satisfaction

New employees will be happier when everything is in place on their first day and following weeks

Ongoing benefits

Saving time and money by automating other related processes

Use Cases

HR
IT Assets
CRM
Service Catalogue
Facility Management

Available on Atlassian Marketplace
